2.5.1

https://github.com/Owen-Guldberg/Lab3.git

2.5.2
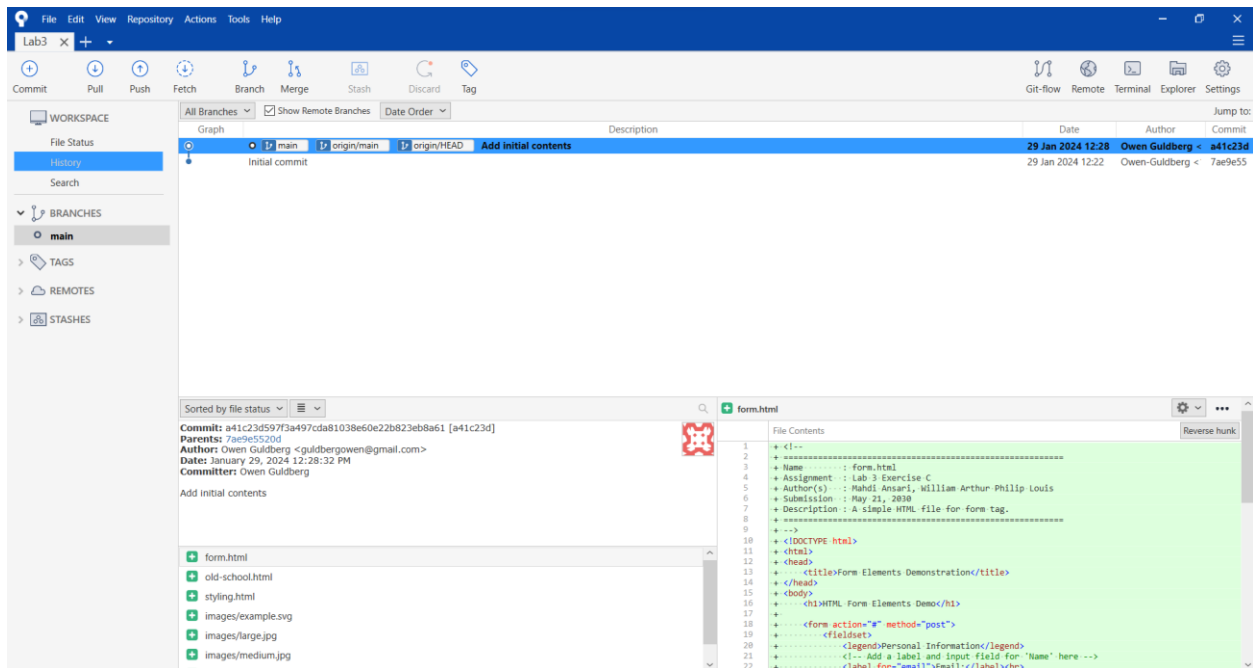

3.2.6

There is extra space on the right side of the page that is not being filled by the table which causes one of the news items to be jammed in there. When the window becomes smaller this problem becomes worse as the image shrinks but that extra margin space takes up the same amount of space in the window and causes there to be a much larger gap.

3.2.9

The layout seems to work good on a variety of mobile device sizes. The images and news items are all in a good layout and everything is still easily readable.

3.3.1

We fixed the layout for the small and medium news items by putting them into a table element. I added my name to the space walk news item.

4.2.1

5.2.1

CSS Margins with ID

This div must have a margin of 30px, and a solid black border of 2px.

CSS Padding

This div must have padding of 30px, and a dashed red border of 2px.

CSS Opacity with Nested Classes

This text must have an opacity of 0.2.

CSS Display Property

I am red.   I am blue.   I am green.

CSS Image Styling with Inline CSS

CSS Hover Effects

Hover over me! My color will change to blue!

5.2.2

There is a margin by default because otherwise text would end up being against the edge of the browser/screen which would make it harder to read and look less professional.

https://www.quora.com/Why-do-web-browsers-style-the-HTML-body-tag-to-have-a-margin-by-default#:~:text=If%20there%20was%20no%20default,just%20look%20like%20normal%20text.

To remove the margin around the body we can either make a class and apply that class to the body or just do it inline in the body element.

We just have to add: 'margin: 0px;' To remove the margin around the body.
